

ABSTRACT

A wireless interface is provided for coupling an audio player having a digital flash memory to an in-car audio system. The interface comprises a holder having a power plug adapted to an in-car cigarette lighter, a restraint for the audio player, and an FM transmitter for broadcasting the audio
5 signal to the usual in-car FM radio. The device permits audio in the flash memory to be played on the in-car system, and provides a convenient means of holding the audio player for touch operation.
